

**Solar Week presents: a short film screening and discussion about diversity in science.**

# FULL SPECTRUM

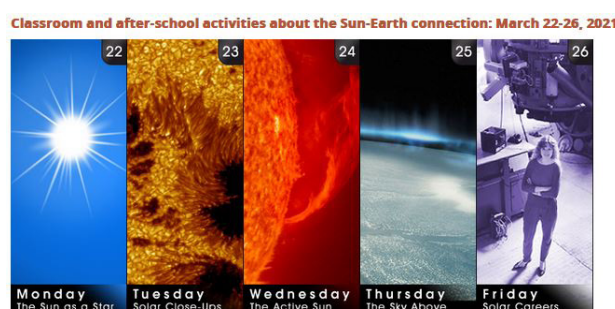

The popular image of a scientist is a white guy in a white lab coat. In **Full Spectrum**, meet scientists changing this notion and learn their perspectives on the challenges of diversity in the sciences.

Join us for a special screening of the NASA-funded short film followed by a discussion with several of the scientists featured in the documentary. Register at the above URL or QR code. All are welcome to attend and ask questions.

Content will be suitable for middle school ages and older.
